Applicant's arguments (see remarks on page 9 lines 20-21, page 10, and line 1, 10-12 of the remarks filed on 9/17/07). The prior art of record Russo et al., (US. 6,330,345) discloses methods for fingerprint "adjustment" that is adjusting the captured image to improve quality and not fingerprint "matching". Instead Russo merely

discloses obtaining an image of a fingerprint by measuring difference in capacitance between a metal sensing plate and the ridges and valleys of a finger. Russo fails to teaches or suggests "matching a query fingerprint", "performing a one-to-one matching of the query fingerprint only with file fingerprints comprising a per-determined rank in said ranked list", "deriving a ranked list of the file fingerprints based on said identifying", as commonly included in each of the independent claim 1, 8, and 15, the prior art of record fails to teach either singularly or in combination, fails to anticipate or render the above limitations obvious.
